SUMMARY

Full-stack engineer with 6+ years of experience, the last 3+ building production anti-phishing systems at PhishFort. Owned the edge service layer and client dashboard (Cloudflare Workers, D1, tRPC), migrated 3M+ records with zero downtime, and helped cut phishing takedown time by ~50%. TypeScript end-to-end, from data model to UI.

Key impact: 3M+ records migrated with zero downtime · ~50% faster phishing takedowns · sub-second dashboards for enterprise clients (previously timing out)

SKILLS

Specialties — Cloudflare edge & serverless (Workers, D1, Pages) · applied security / anti-phishing & fraud prevention · type-safe API design (tRPC, REST) · data migration at scale

Frontend — React · Next.js · TypeScript · Redux / Redux-Saga · React Query · Tailwind CSS · shadcn/ui **Backend** — Node.js · NestJS · Express · Prisma · PostgreSQL · Cloudflare D1 · MongoDB

Cloud / DevOps — Cloudflare · GCP · Firebase · AWS · Docker · CI/CD · Git **AI tooling** — Claude Code · Codex · agentic workflows · LLM / AI-SDK integration

EXPERIENCE

Full-Stack Software Engineer — PhishFort (anti-phishing platform)

Remote · Apr 2023 – Jun 2026

- **Designed and owned the edge service layer** (Cloudflare Workers) that unites three separate security backends into one fast data source — the sole read path for the client dashboard. (D1, tRPC)
- **Migrated 3M+ incident records and 160K+ files** off a legacy Firebase→Postgres pipeline into edge SQL (Cloudflare D1) with **zero downtime** for paying clients — turning a live customer complaint (lagging large-client histories) into near-instant loads.
- **Fixed views that timed out for the largest enterprise clients:** replaced a query fan-out that hit platform limits with a single database call resolving a client's full sub-account tree at any depth — from timeouts to sub-second loads. (recursive CTE)
- **Built the client-facing dashboard** (Next.js, tRPC) giving brands real-time visibility into every phishing incident and report, plus instant email + in-app @mention updates that replaced slow client↔analyst email threads.
- **Co-built Payne**, the analyst incident-management dashboard (unified priority queue with auto-triage and assignment), and **added AI-assisted triage** that classifies incidents and validates evidence at submission — together cutting **end-to-end takedown time by ~50%**.
- **Designed and shipped NightHawk**, a cross-browser anti-phishing extension for the crypto community; grew to **2,000+ installs** and enabled in-browser phishing reports.
- **Built a direct-to-storage upload path** for large evidence files (presigned URLs), fixing failed uploads that exceeded serverless request-size limits.

Full-Stack Developer — Addis Software PLC

Addis Ababa · Aug 2019 – Dec 2022

- **Co-designed the architecture of Behiwot**, an event-planning platform, and delivered its complex production UI in React.
- **Built secure Node.js / Express APIs**, integrated local and international payments, and improved state management (Redux-Saga) and MongoDB aggregations.

AI-AUGMENTED (AGENTIC) ENGINEERING

- Run **Claude Code** and **Codex** as daily coding agents inside a **security-isolated Docker sandbox** — agents execute against the codebase without exposing host credentials.
- **Shipped production work agent-first**, including the D1 performance rewrite above, via a plan → review → build workflow keeping AI output auditable.

EDUCATION & CERTIFICATIONS

B.Sc. in Computer Science & Engineering — Adama Science and Technology University

2015 – 2019

AWS Fundamentals: Building Serverless Applications

Coursera
